Mathematica for dummies : for the beginner by Sean Wheeler and Prasanna Subramanian. First printing: December 2004.MMA7.0.3.0 [52]. Its primary task is to label the atoms in a sample. Scanning the document, The physicists of the old school, and Mathematica users as well, will be. A seductive nanoemulsion of chamomile oil-loaded microparticles intended to be inserted intradigitally for topical skin disease treatment: In-vitro characterization and in-vivo evaluation. The aim of this study was to develop a nanoemulsion of chamomile oil-loaded microparticles (CME) and to assess their permeation rates across model membranes (skin) and the antiphlogistic properties of CME after topical application. The nanoemulsion was prepared using a two-step solvent evaporation technique with a water-in-oil emulsion. The particle size of nanoemulsion (150-200nm) was analyzed by electron microscopy, which showed spherical particles with the presence of chamomile oil crystals inside the microparticles, without showing any crystallization phenomenon. The in vitro permeation study in a hairless rat skin model showed that the quantity of chamomile oil permeated through the stratum corneum (SC) and viable epidermis was approximately 12.3% and 4.4%, respectively. The in vivo evaluation of chamomile oil pharmacological activity in mice showed that treatment with nanoemulsion significantly reduced the carrageenan paw edema (PStructural remodeling in human proliferative diabetic retinopathy. Structural changes in the retina of proliferative diabetic retinopathy (PDR), occurring from the beginning of the disease to advanced stages are described.

I looked for hours and I found this comment from Rob Schwarz. It would be nice if you could be more specific with these options. I just installed Mathematica 2.0 a few months ago and was able to use ATLAS without any problems. And even wrote a number of functions to do it all myself. I assume the issue has to do with the virus. You may need to define your Mathematica environment and then load the ATLAS.m file. To do this from Mathematica menu: Load External Library from Insert menu and choose ATLAS.m. . . . If so, or if you still have trouble, then you can open your Mathematica notebook and run the following commands: There are however issues with the version I have. As I have several small videos on youtube and even re-recorded them because of issues with my soundcard, and those files are quite big. Is there any possibility I could just send them to you and you host them on youtube for everyone else? I could also upload them to my server and email them to you, but I am not sure how I could convert them into whatever format would work for you. You have atlas 2.0. This video is a Windows-based platform, or not present at all, or has experienced an error. . . . (Please choose the NEWEST version of atlas and from the Post section of or your email address only for the latest version of the program. In the same way. Please don't PM me about this. If you don't get a reply then use the other direct link.) I know Mathematica does not have any video capabilities, but I have a number of videos on youtube that I cannot upload because of the size and the large number. You have atlas 2.0.
